Team LetNogo

Joan Chirinos, Susan Lin, Johnny Wong, Thomas Zhao

Project: *Tuesday*

Project Summary

Project managing website. Projects are created by a project manager, which can then be joined by project members. The manager can send out the project ID for other teammates to search up and join. When teammates join, tasks may be delegated. Once a task is assigned, the user's feed will update. Each member will also be able to comment on the completeness of each task (not started, working on it, done, etc.)

There will be a meetup component in which managers are able to type in locations and subsequently assign time and description/explanation. The weather for the date of the meetup will also be shown, for convenience.

The database will have tables for login info, projects, tasks, etc.

There may be a messaging system which allows teammates to "comment" on work, much like how "reactions" work on Facebook. There would NOT be a reply system in order to encourage face-to-face communication; i.e. the messaging system is solely for quick comments and should be limited to very few characters.

APIs

- Accuweather (Locations) (tentative)
- Quotes (tentative)
- We want to add more

Roles

Joan Chirinos – Project Manager, Frontend (HTML, JS, app.py)
Susan Lin – Database, API
Johnny Wong – Database, Frontend (HTML, JS, app.py)
Thomas Zhao – API, Frontend
